

Website Client Brief & Quick Reference Document (QRD)

Prepared for: website developer | Status: draft for review | Date: _____ | Version: 1.0

1. Project Summary

Zebo Healthcare Limited is launching a new company website to generate enquiries from clients and families seeking care services, and to establish the business as a credible, trustworthy care provider. The site should cover seven core service lines and include a prominent enquiry form so prospective clients can make contact directly.

- **Primary goal:** Generate client/family enquiries for care services (this is the #1 site objective).
- **Secondary goals:** Build trust and credibility; support future recruitment of care staff; rank locally for care-related search terms.
- **Reference sites:** lovingangels.org.uk (warm, service-led, family-facing tone) and onecall24.co.uk (clear sector segmentation, prominent call-back form, strong navigation) — see Section 8 for what to borrow from each.

2. Business Background

- **Trading name:** Zebo Healthcare Limited
- **Regulator status:** Not yet CQC-registered (or equivalent). The site must NOT state or imply CQC registration until this is confirmed. Use holding language such as "CQC registration in progress" or omit regulator badges entirely until confirmed — see Open Question 2.
- **Coverage area:** [Client to confirm town/county/radius covered]
- **Company registration number:** [Insert once available, for footer/legal pages]
- **Contact details for site:** Phone: [insert] | Email: [insert] | Office address: [insert, or "office-based, no public address" if applicable]

3. Services to Feature

All seven services need their own page (URL) plus a summary card on the homepage. Draft one-line positioning statements below — client to review and refine before copywriting begins.

Service	One-line positioning (draft — client to refine)
Adult Personal Care	Everyday support with dignity — washing, dressing, medication and meals — so clients stay independent at home.
Live-in Care	A dedicated carer living in the home, offering round-the-clock support as a genuine alternative to residential care.
Children's Services	Specialist, safeguarding-led care for children and young people with additional or complex needs.
Learning Disabilities	Person-centred support that builds independence, confidence and community participation.
Care Homes	Reliable, compliance-checked care staff supplied to care home operators, filling shifts quickly without compromising on quality.
Complex Care	Nurse-led packages for clients with clinical or long-term health needs, delivered safely at home.
Palliative Care	Compassionate, dignified end-of-life support for clients and their families, coordinated with clinical teams.

Confirmed: "Care Homes" is a staffing-supply offer — Zebo Healthcare supplies vetted care staff to care home operators, rather than helping families choose a home. This page should speak to care home managers/operators as the audience, with its own CTA (e.g. "Request Staff"), separate from the family-facing enquiry CTA used on the other six service pages.

4. Site Structure (Sitemap)

Page	Purpose / Key content
Home	Hero statement + enquiry CTA, trust signals (regulator status, DBS-checked staff, areas covered), summary of all 7 service lines with links, testimonials, "Why Zebo Healthcare" USPs, footer contact strip.
About Us	Company story, mission/values, leadership/registered manager profile, accreditations & regulator status, safeguarding commitment.
Services — overview	Grid/menu of the 7 service lines, each linking to its own page.
→ Adult Personal Care	What's included (washing, dressing, medication prompts, meal prep, mobility support), who it's for, how to arrange it, CTA.
→ Live-in Care	How live-in care works, carer matching process, typical day, cost guidance/"request a quote", comparison vs. care home, CTA.
→ Children's Services	Age ranges/conditions supported, safeguarding & DBS assurance, school/holiday support, family-first messaging, CTA.
→ Learning Disabilities	Person-centred, outcomes-focused support description, specialist staff training, community inclusion focus, CTA.
→ Care Homes (staffing supply)	B2B-facing: how staff supply works, compliance/vetting standards, shift cover process, "Request Staff" CTA aimed at care home operators/managers rather than families.
→ Complex Care	Clinical/complex conditions supported (e.g. tracheostomy, PEG feeding, ventilation, acquired brain injury), nurse-led oversight, care package process, CTA.
→ Palliative Care	Compassionate end-of-life description, family support, coordination with hospice/district nurses/GP, 24/7 availability, CTA — sensitive tone throughout.
Areas We Cover	Map or postcode list of coverage area.
Careers / Join Our Team	Why work for Zebo, current vacancies, and the quick staff registration form (see Section 6) — kept clearly separate from the client enquiry form.
Testimonials / Case Studies	Family and client reviews, anonymised case studies (with consent).
News / Resources (optional)	Guides for families e.g. "How to arrange live-in care", "Funding your care", CQC updates.
Contact Us	Main enquiry form (see Section 5), phone/email, office address, opening hours, map.
Policies	Privacy policy, cookie policy, safeguarding policy, complaints procedure, terms of use.

5. Contact / Enquiry Form Requirements

The enquiry form is the site's primary conversion point and should be reachable from every page (sticky header button and/or footer, plus a full form on the Contact page). Recommend also offering a phone "Call back" mini-form in the header, in the style of the OneCall24 example, for visitors who want a fast response.

5.1 Form fields

Field	Type	Required?
Full name	Text	Yes
Relationship to person needing care (self / family member / professional referrer)	Dropdown	Yes
Phone number	Text (tel)	Yes
Email address	Text (email)	Yes
Service enquiring about	Dropdown — the 7 services + "Not sure / general enquiry"	Yes
Location / postcode	Text	Yes
When is care needed?	Dropdown — Urgent (within 48hrs) / Within 2 weeks / Within a month / Just researching	Yes
Message / additional details	Text area	No
Preferred contact method	Radio — Phone / Email	No
Best time to call	Text or dropdown	No
Consent to be contacted & privacy notice acknowledgement	Checkbox, unticked by default	Yes
Marketing opt-in (separate from consent above)	Checkbox, unticked by default	No
Spam protection	reCAPTCHA / honeypot field (invisible to user)	System

5.2 Functional requirements

- On submission: auto-confirmation email to the enquirer, and a notification email/SMS to the care team inbox (specify recipient address).
- Form data should feed into a CRM or at minimum a secure, exportable spreadsheet — confirm with developer whether a CRM integration is in scope.
- Store submissions securely and only as long as necessary (data retention policy needed — see Section 7).
- Mobile-first: the form must be quick and easy to complete one-handed on a phone, since many enquiries will come from family members searching urgently.
- Clear success message and a fallback direct phone number shown near the form for anyone who prefers to call.
- Accessible labelling (not placeholder-only text) so the form works with screen readers.

6. Staff Registration ("Work With Us") Form

Since Zebo Healthcare supplies staff to care homes, the site needs a second, distinct enquiry path: a quick registration form for care staff looking for work. This should feel fast and low-friction (candidates often browse on mobile between shifts), and must be kept visually and functionally separate from the client/family enquiry form so the two enquiry types never get mixed up internally.

6.1 Where it lives

- A dedicated "Work With Us" / "Careers" page, linked from the main navigation and footer — not buried inside the client-facing service pages.
- A short teaser + "Register Your Interest" button can also appear in the footer of every page, similar to how OneCall24 gives staff their own dedicated area of the site ("Healthcare Professionals") distinct from the client-facing area.
- Consider whether the site should adopt a two-audience navigation split like OneCall24's ("For Care Homes" / "For Care Staff") at the top level — flagged as Open Question 6 below.

6.2 Quick registration form fields

Keep this shorter than a full job application — the goal is to capture enough for a recruiter to follow up by phone, not to replace the full compliance/vetting process.

Field	Type	Required?
Full name	Text	Yes
Phone number	Text (tel)	Yes
Email address	Text (email)	Yes
Role / discipline	Dropdown — e.g. Care Assistant, Senior Carer, Support Worker, Nurse (RGN/RMN), Complex Care Carer, Other	Yes
Right to work in the UK	Radio — Yes / No / Requires sponsorship	Yes
Years of care experience	Dropdown — None/entry level, Under 1 year, 1–3 years, 3+ years	Yes
Relevant qualifications (e.g. NVQ/QCF, Care Certificate)	Text or multi-select	No
Areas willing to work in / postcode	Text	Yes
Availability (days/shifts, full-time/part-time/bank)	Checkboxes or dropdown	Yes
Current DBS check status	Radio — Have valid DBS / Willing to undergo DBS / Not sure	Yes
Upload CV	File upload (PDF/Word)	No — but encouraged
Consent to be contacted & privacy notice acknowledgement	Checkbox, unticked by default	Yes
Spam protection	reCAPTCHA / honeypot field (invisible to user)	System

6.3 Functional requirements

- On submission: auto-confirmation to the candidate ("Thanks — a member of our recruitment team will be in touch"), and a notification to the recruitment/staffing inbox — this must route separately from client enquiries (see Section 5.2).
- CV upload should be virus-scanned and size-limited (e.g. 5MB) by the developer; confirm accepted file types.
- Submissions should feed the same CRM/spreadsheet system as client enquiries if one system is used, but tagged clearly as "Staff" vs "Client" so they're never confused.
- Data retention and consent wording will differ slightly from the client form (recruitment data has its own GDPR considerations) — confirm retention period with the client before launch.

- Optional future enhancement: live vacancy listings that a candidate can apply to directly, rather than only a general register-of-interest form — not required for launch but worth designing the CMS to support later.

7. Legal, Safeguarding & Compliance Requirements

Care sector websites carry extra responsibility because visitors are often vulnerable or contacting on behalf of a vulnerable person. The developer should build the following in from the start, not bolt them on later:

- GDPR-compliant privacy policy and a clear consent statement on the enquiry form (data used only to respond to the enquiry unless opted in to marketing).
- Cookie consent banner if any analytics/marketing cookies are used.
- Accurate regulator status displayed — do not display a CQC (or other regulator) badge or "CQC-registered" claim until registration is confirmed.
- Safeguarding statement, and a visible complaints procedure — expected by families and often expected by regulators.
- Accessibility: aim for WCAG 2.1 AA as a baseline — larger text options, good colour contrast, keyboard navigation. This audience skews older/less tech-confident.
- Case studies/testimonials must have documented consent before publishing, especially for children's services and vulnerable adults — no identifying photos of children without written parental consent.

8. SEO & Content

- Each service page should target its own local search terms, e.g. "live-in care [town/county]", "complex care at home [town]".
- Meta titles/descriptions for every page — developer or copywriter to draft, client to approve.
- Google Business Profile linked and embedded map on Contact/Areas We Cover page.
- Blog/resources section optional at launch but recommended for SEO longevity (guides for families tend to perform well and build trust).
- Structured data (schema.org) for LocalBusiness / MedicalBusiness where appropriate — improves how the site appears in search results.

9. Design & Tone of Voice

Reference sites give two useful but different directions — recommend blending them:

- **From lovingangels.org.uk:** Warm, reassuring, human tone; photography of real care moments; language that speaks directly to the person needing care or their family, not corporate/clinical language.
- **From onecall24.co.uk:** Clear sector-by-sector navigation; prominent "Call Me Back" quick-contact widget in the header; strong use of client testimonials and news content for credibility.
- **Tone:** Compassionate, clear, jargon-free. Avoid anything that reads as a hard sell — families researching care are often stressed or emotional, especially on the palliative care and complex care pages.
- **Brand assets needed from client:** Logo (or logo design as separate scope), brand colours, font preference, photography (stock vs. commissioned — real photography builds far more trust in this sector).

10. Technical Requirements

- CMS: client should be able to edit text, add news posts, and update the team page without developer involvement — confirm platform (e.g. WordPress, Webflow) and provide basic training/handover documentation.
- Domain and hosting: confirm who owns/purchases the domain and hosting, and who manages renewals.
- SSL certificate (https) — mandatory for a site handling personal enquiries.
- Mobile responsive across phone/tablet/desktop — most family enquiries happen on mobile.
- Analytics: Google Analytics (or equivalent) plus conversion tracking on the enquiry form so the client can see what's working.
- Backups and update/maintenance plan post-launch — confirm if this is included or a separate retainer.

11. Content the Client Will Supply

- Final copy approval and any specific wording requirements (regulator status must be signed off by the client before publishing).
- Photography/imagery, or budget/brief for stock or commissioned photography.
- Testimonials and case studies with documented consent.
- Company registration details, policies (privacy, safeguarding, complaints) for legal pages — client's compliance lead or solicitor to review before publishing.
- Staff/management bios for the About page.

12. Timeline (Indicative — to be agreed with developer)

Phase	Deliverable	Indicative duration
1. Discovery & sign-off	This brief finalised, sitemap agreed, wireframes approved	1–2 weeks
2. Design	Homepage + 1 inner page design concept, then full design set	2–3 weeks
3. Content & copy	Copywriting, photography/imagery sourcing, policy documents drafted	Runs parallel to design
4. Build	CMS build, all pages, enquiry form + notifications, testing	3–4 weeks
5. QA & compliance check	Accessibility check, GDPR/cookie check, cross-device testing, form testing	1 week
6. Launch	DNS switch-over, go-live, post-launch monitoring	1 week

13. Open Questions for the Developer to Help Answer

- 1. Until CQC registration is confirmed, should the site omit regulator references entirely, or use "registration in progress" language? Recommend client confirms this with their compliance advisor before copy is written.
- 2. CRM/notification routing — where should client enquiries and staff registrations each go, and does an existing CRM need integrating? These two enquiry types should route to different inboxes/teams.
- 3. Does the client want live vacancy listings at launch, or is a general "register your interest" form (as scoped in Section 6) sufficient for phase one?
- 4. Should the site adopt a two-audience top-level navigation split ("For Care Homes" vs "For Care Staff"), similar to OneCall24, or keep staff recruitment to a single Careers page for a leaner launch?
- 5. Budget and platform preference — does the client have a CMS preference or hosting budget that should shape technical recommendations?
- 6. CV upload handling — does the client have a preferred storage location (e.g. cloud drive, ATS) for uploaded CVs, or should the developer recommend one?

14. Sign-off

This brief is a starting point for discussion with the developer, not a final specification. Recommend a kickoff call to walk through Section 12 before design work begins.

Client approval: _____ Date: _____

Developer acknowledgement: _____ Date: _____
